

GLOBAL COVID-19 ANALYSIS (2020 to 2022)

Shivani Gaur

TOOLS & TECHNOLOGIES USED: Microsoft Power BI Desktop, MS Excel, MS Word, MySQL, Microsoft Power BI Service.

SUMMARY:

The spread of the COVID 19 pandemic has seen big data being deployed and distributed around the world. Billions of people have been tested, millions have had the disease, and these figures change on a daily basis while the public, as well as governmental and health agencies around the world, want the latest information.

As well as being an obvious public health challenge, it is also been a big data challenge and one that has led to the utilization of many visualizations. The COVID-19 Information Dashboard is a data visualization dashboard that gives the latest information.

Users can search by variant type, continent and country . The dashboard will then display the total number of positive cases reported in this area over this time frame.

Additional graphs provide a variety of visualizations and ways to present the data to showcase by the top countries.
